Module 7 Project: Testing (Part 2)

Instructions

Continue Lab 7 to create an asynchronous test case. Begin with the section titled 'Testing asynchronous code' and complete all coding through the section titled 'Implementing positive and negative tests for getAllCountries'.

Be sure your code compiles cleanly. Get screen snips of the output of your test execution.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once your project is complete, commit your files (source code and a PowerPoint file of multiple screen snips) to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project.
